

Door Set Recycling Potential

IDM Doors Ltd Data Sheet 11

There are currently a number of elements within a doorset that may be recycled.

- Pvc outer frame
- Aluminium, timber or steel reinforcement
- Glass units
- Steel lock and hinge components
- Aluminium threshold and hardware components

The door leaf itself cannot currently be separated into its component parts, but the materials used have potential for use as insulating or filling materials.

The process of converting a door slab for this kind of use is not economically viable at the present time but this may change as technology advances.
